Electronic Module PQDXXA-PROFINET-Z10	62
Through Drive – Mounting Kits	63
Through Drive – Flange Load Limitation	64
Through Drive – Shaft Load Limitations	65

With through drive for single and multiple pumps

Swash plate type for open circuit

Technical Features

- Low noise level
- Fast response
- Service-friendly
- High self-priming speed
- Compact design
- Through drive for 100 % nominal torque

General Information

Fluid recommendations

Premium quality hydraulic mineral fluid is recommended, like HLP oils to DIN 51524 (part 2 & 3) or ISO6743/4 (HM & HV). Bruggen-value recommended to be 30 N/mm² minimum for general application and 50 N/mm² for heavily loaded hydraulic equipment and fast cycling machines and/or high dynamic loads, measured in accordance with DIN 51 347-2. See also Document MSG30-3248/UK Parker Hydraulic Fluids.

Viscosity

The normal operating viscosity should range between 16 and 100 mm²/s (cSt). Max. start-up viscosity is 1000 mm²/s (cSt).

Filtration

For maximum pump and system component functionality and life, the system should be protected from contamination by effective filtration.

Fluid cleanliness should be in accordance with ISO classification ISO 4406:1999. The quality of filter elements should be in accordance with ISO standards.

General hydraulic systems for satisfactory operation:

Class 20/18/15, according to ISO 4406:1999

Recommended cleanliness for maximum component life and functionality: Class 18/16/13, according to ISO 4406:1999

Seals

Check hydraulic fluid specification for chemical resistance of seal material.

Check temperature range of seal material and compare with max. system and ambient temperature.

N – Nitrile (FKM shaft seal)	-25...+ 90 °C
V – FKM (FKM shaft seal)	-25...+115 °C
W – Nitrile (PTFE shaft seal)	-30...+ 90 °C

Note: The highest fluid temperature will be at the drain port of the pump, up to 25 °C higher than in the reservoir.

Y		75 kW	480 Nm
Z		90 kW	580 Nm
2		110 kW	700 Nm
3		132 kW	840 Nm
4		160 kW	1020 Nm
5		180 kW	1150 Nm
6		200 kW	1280 Nm
Function			
	L	Horse power control with pressure control ⁴⁾	
	C	Horse power control with load sensing (single spool)	
	Z	Horse power control with two spool LS control	
Control variation			
		C	Standard version, integrated pilot valve ¹⁾
		1	NG 6 interface top side
		W	With unloading function, 24 VDC solenoid
		K	Prop.-pilot valve type PVACRE...K35 mounted
		Z	Without integrated pilot valve, NG6 interface, for mounting of accessory code PVAC* ⁴⁾
		B	Without integrated pilot valve, without NG6 interface ^{1), 4)}
		P	*ZZ with mounted pilot valve PVAC1P ²⁾

Remark:
 As torque is pretty much speed independent power at alternative speeds can get recalculated to 1500 rpm for code selection easily.

Example:
 Your engine allows 90 kW @ 1800 rpm →
 $\frac{90 \text{ kW}}{1800 \text{ rpm}} \times 1500 \text{ rpm} = 75 \text{ kW}$
 → select a first digit "Y"-control.

		M	pilot operated pressure control, pressure sensor and proportional pilot valve type PVACRE...K35 mounted for pressure control and/or power control

⁵⁾ further info in MSG30-3254

Standard Pressure Control

Control option MMC

The standard pressure control adjusts the pump displacement according to the actual need of flow in the system in order to keep the pressure constant.

Control schematics

Note: Upgrade to the MRC control by simply removing the ISO 6149 M14x1.5-plug. Thread adapters PVCKK** (last two digits defining seal and thread) are available separately if required. PVCKKN1 for ex. for NBR-sealed and towards G1/4 BSPP. Please consult spares list for all further versions.

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

Dynamic characteristic of flow control *

* Curve shown exaggerated

	Time on-stroke [ms]		Time de-stroke [ms]	
	against 50 bar	against 350 bar	zero stroke 50 bar	zero stroke 350 bar
PV360	520	180	120	82

Pressure adjustment range	15 to 420 bar
Factory setting pressure	50 bar
Differential pressure adjustment range	10 to 40 bar
Factory setting differential pressure	15 bar
Control oil consumption	Max 8.0 l/min
Typical pilot flow	approx 1.5 l/min

Standard Pressure Control with NG6 Interface

Control option MM1

With code MM1 the standard pressure control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

Standard Pressure Control with Electrical Unloading

Control option MMW

With code MMW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

Standard Pressure Control with Proportional Pilot Valve

Control option MMK

With code MMK a proportional pilot valve of type PVACRE... K35 (see page 43) is mounted on the top side interface.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

Standard Pressure Control without Integrated Pressure Pilot Valve

Control option MMZ

Control MMZ has no integrated pilot valve but a valve interface NG6 DIN 24340 on the top.

This version is recommended for valve accessories.

For operation at >350 bar please select respective valve accessories (see page 40)

Remote Pressure Control

Control option MRC

The remote pressure control adjusts the pump displacement according to the actual need of flow in the system

in order to keep the pressure constant at a level given by a remotely installed pilot valve.

Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

Dynamic characteristic of flow control *

* Curve shown exaggerated

	Time on-stroke [ms]		Time de-stroke [ms]	
	against 50 bar	against 350 bar	zero stroke 50 bar	zero stroke 350 bar
PV360	520	180	120	82

Pressure adjustment range	15 to 420 bar
Factory setting pressure	50 bar
Differential pressure adjustment range	10 to 40 bar
Factory setting differential pressure	15 bar
Control oil consumption	Max 8.0 l/min
Typical pilot flow	approx 1.5 l/min

Remote Pressure Control with NG6 Interface

Control option MR1

With code MR1 the remote pressure control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

Remote Pressure Control with Electrical Unloading

Control option MRW

With code MRW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

Remote Pressure Control with Proportional Pilot Valve

Control option MRK

With code MRK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

Remote Pressure Control without Integrated Pressure Pilot Valve

Control option MRZ

Control MRZ has no integrated pilot valve but a NG6 DIN 24340 interface topside.

Control option MRB

Control MRB has no integrated pilot valve.

This version is recommended for valve accessories.

Load Sensing Control

Control option MFC

The pilot pressure of the load sensing control is taken from a load sensing port in the hydraulic system. It is

used to match pump flow to system demands. Integrated pilot valve allows pmax adjustment.

Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

Dynamic characteristic of flow control *

* Curve shown exaggerated

	Time on-stroke [ms]		Time de-stroke [ms]	
	stand-by to 50 bar	stand-by to 350 bar	50 bar to stand-by	350 bar to stand-by
PV360	500	690	830	50

Pressure adjustment range	15 to 420 bar
Factory setting pressure	50 bar
Differential pressure adjustment range	10 to 40 bar
Factory setting differential pressure	10 bar
Control oil consumption	Max 8.0 l/min
Typical pilot flow	approx 1.5 l/min

Load Sensing Control with NG6 Interface

Control option MF1

With code MF1 the remote pressure control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

Load Sensing Control with Electrical Unloading

Control option MFW

With code MFW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

Load Sensing Control with Proportional Pilot Valve

Control option MFK

With code MFK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

Load Sensing Control without Integrated Pressure Pilot Valve

Control option MFZ

Control MFZ has no integrated pilot valve but a NG6 DIN 24340 interface topside.

This version is recommended for valve accessories.

Control option MFB

Control MFB has no integrated pilot valve.

2 Spool Load Sensing Control

Control option MTP

The pilot pressure of the load sensing control is taken from a load sensing port in the hydraulic system. It is used to match pump flow to system demands. With the 2

spool control the interaction of the two control functions is avoided by using two separate control valves for flow and pressure compensation.

Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

Dynamic characteristic of flow control *

* Curve shown exaggerated

	Time on-stroke [ms]		Time de-stroke [ms]	
	stand-by to 50 bar	stand-by to 350 bar	50 bar to stand-by	350 bar to stand-by
PV360	920	670	1000	170

Pressure adjustment range	15 to 420 bar
Factory setting pressure	50 bar
Differential pressure adjustment range	10 to 40 bar
Factory setting differential pressure load sensing	10 bar
Factory setting differential pressure, pressure control	15 bar
Control oil consumption	Max 8.0 l/min
Typical pilot flow	approx 1.5 l/min

2 Spool Load Sensing Control with NG6 Interface without Integrated Pressure Pilot Valve

Control option MTZ

Control MTZ has no integrated pressure pilot valve but NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

Note: The MT1 control option is not available for new releases as is it identical to the MTZ control.

2 Spool Load Sensing Control with Proportional Pilot Valve

Control option MTK

With code MTK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

2 Spool Load Sensing Control without Integrated Pressure Pilot Valve

Control option MT2

Control MT2 has a valve interface NG6 DIN 24340 on the top side and remote pressure port internal supply.

2 Spool Load Sensing Control without Integrated Pressure Pilot Valve

Control option MT3

Control MT3 with pressure remote port external supply. Incl. closed NG6-pad.

Horse Power/Torque Controls with Pressure Control

Control option *LC

The horse power control type *L* provides the benefit of the pressure control, plus the ability to limit the input power the pump will draw. These controls are beneficial when the power available from the prime mover for the

hydraulics is limited or the application power demand has both high flow/low pressure and low flow/high pressure duty cycles.

Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

Dynamic characteristic of flow control *

* Curve shown exaggerated

	Time on-stroke [ms]		Time de-stroke [ms]	
	against 50 bar	against 350 bar	zero stroke 50 bar	zero stroke 350 bar
PV360	90	90	100	100

Pressure adjustment range	15 to 350 bar
Factory setting pressure	350 bar
Differential pressure adjustment range	10 to 40 bar
Factory setting differential pressure	15 bar
Control oil consumption	Max 8.0 l/min
Typical pilot flow	approx 1.5 l/min

See Horse Power characteristic curves on page 30

Horse Power/Torque Control with NG6 Interface

Control option *L1

With code *L1 the horse power control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

Horse Power/Torque Control with Electrical Unloading

Control option *LW

With code *LW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

Horse Power/Torque Control with Proportional Pilot Valve

Control option *LK

With code *LK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

Horse Power/Torque Control without Integrated Pressure Pilot Valve

Control option *LZ

Control *LZ has no integrated pilot valve but a NG6 DIN 24340 interface topside.

This version is recommended for valve accessories.

Control option *LB

Control *LB has no integrated pilot valve.

Horse Power/Torque Controls with Load Sensing

Control option *CC

The horse power control type *C* provides the benefit of the load sensing control, plus the ability to limit the input power the pump will draw. These controls are beneficial when the power available from the prime mover for the

hydraulics is limited or the application power demand has both high flow/low pressure and low flow/high pressure duty cycles.

Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

Dynamic characteristic of flow control *

* Curve shown exaggerated

	Time on-stroke [ms]		Time de-stroke [ms]	
	stand-by to 50 bar	stand-by to 350 bar	50 bar to stand-by	350 bar to stand-by
PV360	90	90	100	100

Pressure adjustment range	15 to 350 bar
Factory setting pressure	350 bar
Differential pressure adjustment range	10 to 40 bar
Factory setting differential pressure	15 bar
Control oil consumption	Max 8.0 l/min
Typical pilot flow	approx 1.5 l/min

See Horse Power characteristic curves on page 30

Horse Power/Torque Control with Load Sensing & NG6 Interface

Control option *C1

With code *C1 the horse power control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

Horse Power/Torque Control with Load Sensing & Electrical Unloading

Control option *CW

With code *CW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

Horse Power/Torque Control with Load Sensing & Proportional Valve

Control option *CK

With code *CK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

Horse Power/Torque Control with Load Sensing without Integrated Pilot Valve

Control option *CZ

Control *CZ has no integrated pilot valve but NG6 DIN 24340 interface topside.

Control option *CB

Control *CB has no integrated pilot valve.

Typical Horse Power/Torque Control Characteristics

Typical Horse Power/Torque Control Characteristics

Speed : n = 1500 rev/min
 Temperature : t = 50 °C
 Fluid : HLP, ISO VG46
 Viscosity : $\nu = 46 \text{ mm}^2/\text{s}$ at 40 °C
 Pressure : Maximum 350 bar, depending on HP level

Proportional Displacement Control

Control option FDV

The proportional displacement control allows the adjustment of the pump's output flow by an electrical input signal. The actual displacement of the pump is monitored by an electronic displacement sensor and compared with the commanded displacement in an electronic control module PQDXXA-Z10. The command is given as an electrical input signal (0 – 10 V alternatively 4 – 20 mA) from the supervising machine control or a potentiometer.

Control schematics

Version FDV of the proportional control does not provide pressure compensation. Therefore the hydraulic circuit must be protected by a pressure relief valve.

New CIP-Sensor
 (contactless inductive position) eliminates drift due to wear and any manual sensor adjustments.

[---] = FDV included

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

Dynamic characteristic of flow control *

* Curve shown exaggerated

	Time on-stroke [ms]		Time de-stroke [ms]	
	stand-by to 50 bar	stand-by to 350 bar	50 bar to stand-by	350 bar to stand-by
PV360	255	154	266	183

Pressure adjustment range*	35 to 350 bar
Differential pressure adjustment range *	10 to 40 bar
Factory setting differential pressure *	15 bar
Control oil consumption (FDV only)	Max 0.3 l/min

Internal pilot pressure required to control the pump	
FDV	15 bar
UDR	25 bar
UDK	25 bar
UDM	25 bar

* Data valid for UD* version

Proportional Displacement Control with Overriding Pressure Control

Control option UDR

Control version UDR provides electro-hydraulic displacement control and pressure stage mounted on an elbow manifold.

The elbow manifold provides NG6/D03 interface on top to mount a pressure pilot valve (not included in UDR).

Proportional Displacement Control with Proportional Pressure Control

Control option UDK

Control version UDK features proportional pressure pilot valve PVACRE...K35, which enables for electro-hydraulic p/Q control.

By using the digital module PQDXXA-Z10 it is possible to control the displacement proportionally with overriding open loop proportional pressure control.

Proportional Displacement Control with Closed Loop Pressure Control

Control option UDM

Control version UDM includes pressure transducer Parker SCP 8181 CE. In combination with control module PQDXXA-Z10 both closed loop pressure control as well as electronic power limitation can be realized.

Efficiency and case drain flows PV016, PV020, PV023 and PV028

The efficiency and power graphs are measured at an input speed of $n = 1500$ rpm, a temperature of $50\text{ }^{\circ}\text{C}$ and a fluid viscosity of $30\text{ mm}^2/\text{s}$.

Case drain flow and compensator control flow leave via the drain port of the pump. To the values shown are to be added 1 to 1.2 l/min, if at pilot operated compensators the control flow of the pressure pilot valve also goes through the pump.

Please note: The values shown below are only valid for static operation. Under dynamic conditions and at rapid compensation of the pump the volume displaced by the servo piston also leaves the case drain port. This dynamic control flow can reach up to 40 l/min! Therefore the case drain line is to lead to the reservoir at full size and without restrictions as short and direct as possible.

Proportional pressure relief valve PVACRE*

Function

When the pressure in port P exceeds the pressure setting at the solenoid, the poppet opens to port T and limits the pressure in port P to the adjusted level.

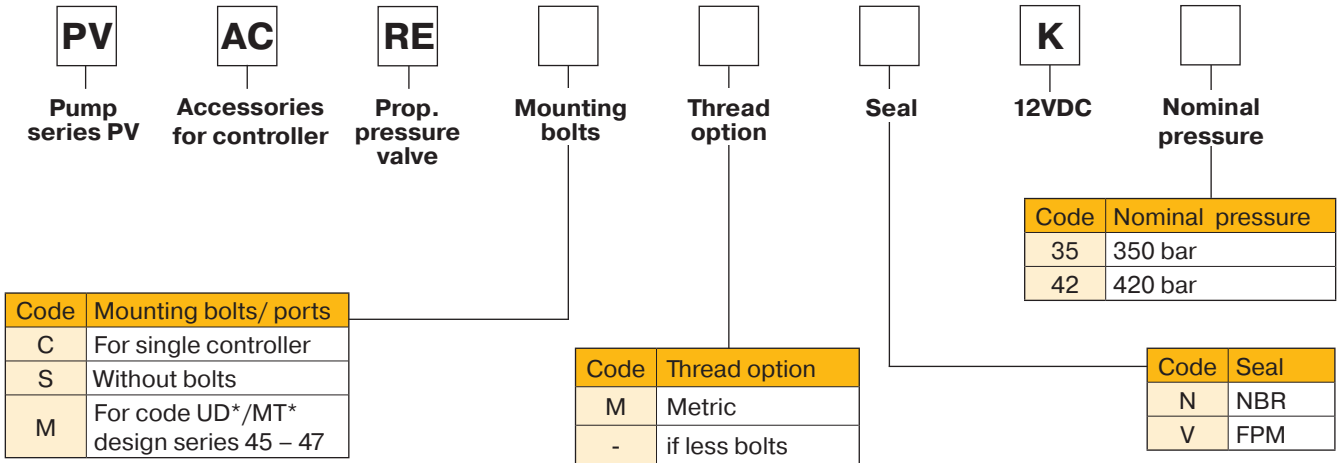

The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400 (see catalogue HY11-3500 for reference).

Technical data

General		
Nominal size		DIN NG06 / CETOP03 / NFPA D03
Mounting position		as desired, horizontal mounting preferred
Ambient temperature	[°C]	-20 ... +70
Weight	[kg]	1.8
Hydraulic		
Max. operating pressure	[bar]	Port P up to 420; port T depressurized
Pressure stages	[bar]	350, 420
Fluid		Hydraulic oil as per DIN 51524 ... 525
Viscosity, recommended permitted	[cSt]/ [mm ² /s]	30 ... 80
	[cSt]/ [mm ² /s]	12 ... 380
Fluid temperature	[°C]	-20 ... +60
Filtration		ISO 4406 (1999), 18/16/13
Linearity	[%]	±4
Repeatability	[%]	±2
Hysteresis	[%]	±4.5 of p _{max}
Electrical		
Duty ratio	[%]	100 ED
Protection class		IP 65 in accordance with EN 60529 (plugged and mounted)
Nominal voltage	[V]	12 (2.2 A for nominal pressure)
Coil resistance	[Ohm]	4.4 at 20°C
Solenoid connection		Connector as per EN 175301-803
Power amplifier, recommended		PCD00A-400 (open loop – NO sensor), PWXXA-400 (closed loop – with pressure sensor)

Ordering code proportional pressure relief valve

Warning:
 Risk of damaging bolt holes! Prior design series will need UNC bolts for pumps with threadcode "3".

Schematic PVACRE*

Features

- Digital control circuit
- Covers all displacements
- Covers all available functions (pressure, displacement, power)
- Predefined parameter sets (Plug & Play)
- Connection via USB cable (USB-A/USB-B)
- Ramp time up to 60 seconds
- Compliant to the relevant european EMC specifications
- Offline editing of parameter sets
- Error diagnosis
- Easy hands on control tuning due to online monitoring of PID gains
- All settings (ramps, MIN/MAX, control parameters) can be stored digitally and recalled from a PC to duplicate settings to other modules

Technical data

Mounting style		Snap-on mounting for EN50022 rail
Body material		Polycarbonate
Inflammation class		V2...V0 acc. UL 94
Mounting position		any
Env. temperature range	[°C]	-20...+55
Protection class		IP 20 acc. DIN 40 050
Weight	[g]	260
Duty ratio	[%]	100
Supply voltage	[V]	18...30 VDC, ripple <5 % eff.
Rush in current	[A]	22 for 0.2 ms
Current consumption	[A]	< 4 for p/Q control ; < 2 for Q-control
Resolution Input Command	[%]	0.025 (power 0.1)
Interface		USB-Typ B
EMC		EN 50 081-2, EN 50 082-2
Connctors		Screw terminals 0.2...2.5 mm ² , plug in style
Cables	[mm ²]	Supply and solenoid cables; 1.5 mm ² (AWG16) overall braid shield. Sensor and command signals; 0.5 mm ² (AWG20) overall braid shield
Max. cable length	[m]	50

For programming the module via PC an interface cable is needed, please order part number PQDXXA-ZXX-KABEL separately.

Ordering code

Programming software

The programming of the p/Q control module is done in an easy to learn mode. To select the pump model and size and to set the control parameters the program ProPVplus must be started. The program runs under common windows systems.

Latest software available at: www.parker.com/pmde

Features

- Display and documentation of parameter sets
- Save and reload of optimized parameter sets
- Offers oscilloscope function for easy performance evaluation and optimization
- Parameter sets for all PVplus pumps are pre-installed in the modules

Features

- Control, monitor and parameter setting via Profinet ® interface
- Covers all displacements and controls (pressure, displacement, power)
- Quick and easy integration with available GSDML and predefined and online available function blocks for I/Os as well as parametrization
- Full integration into overlaying machine control (PLC + HMI) Process parameter, Static Parameter, Conditions
- Predefined data sets for Plug&Play commissioning
- Quick and easy wiring with Push in contact blocks
- Switch function with two RJ45 ports
- Alternative Connection via USB cable (USB-A/USB-B)
- Compatible to the relevant european EMC specification
- Certified by Profibus User Organisation
- Easy error diagnosis

Kit contains positions 1 (and 2 for keyed shaft).

* For PV360 only

Availability of through drive flange and coupling please check with ordering code options per each pump size, starting at page 6

Multiple Pump Combinations – Maximum Moment

Combinations of multiple pumps might require additional pump support to avoid high stress on the front mounting flange. Combinations of two PVplus pumps in the same frame size generally do not need additional support in an industrial application. For combinations of more pumps support is required.

In case of combinations of a PVplus pump with another type of pump it is recommended to calculate the moment for the combination and compare with the maximum moment in table 1 below.

$$\text{Moment } M = (L1 \cdot W1 + L2 \cdot W2 + L3 \cdot W3 + \dots)$$

Note: If the calculated moment M exceed the maximum moment in table 1 below, additional pump support is needed

Table 1: Maximum Moment and Pump Dimensions

* DIN5480 splined

Important notice:

The max. allowable torque of the individual shaft must not be exceeded. For 2-pump combinations there is no problem because PV series offers 100 % through torque. For 3-pump combinations (and more) the limit torque could be reached or exceeded.

Therefore it is necessary to calculate the resulting input as well as through drive torque.
