# Parker Series TEP 2-Way High-Response Valve with Shut-Off Valve Service Manual

2-way servo proportional valves with VCD® technology and shut-off valve series TEP base on the TDP range. Additionally, TEP valves are equipped with a direction control valve for shutting off the pilot system.

#### Structure and function

The 2-way servo proportional valves with shut-off valve TEP have a 2-stage design consisting of a DFplus pilot valve and a main stage with poppet and LVDT.

With the DFplus pilot valve the TEP achieves extremely fast response times: from 10.5 ms (NG25) up to 28 ms (NG100) with an accuracy of <0.1 % of the nominal flow. The pilot valve actively controls the poppet - independent of the pressure conditions in the main ports. It is basically required that the pilot pressure is at the level of the system pressure. At low system pressure the pilot pressure should be min. 140 bar, when high valve dynamics are desired.

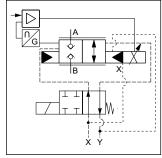

The integrated electronics in the pilot of the TEP has two control loops for the main poppet and the pilot spool.

In the de-energized position of the shut-off valve, the upper pilot control surface of the main spool is pressurized, the lower one is relieved to tank. Independent of the DFplus pilot valve, the main spool remains always closed, if the shut-off valve is not activated.

If the solenoid of the shut-off valve is energized, the position of the main spool is controlled by DFplus pilot valve and LVDT.

The shut-off valve can be ordered with position control optionally.

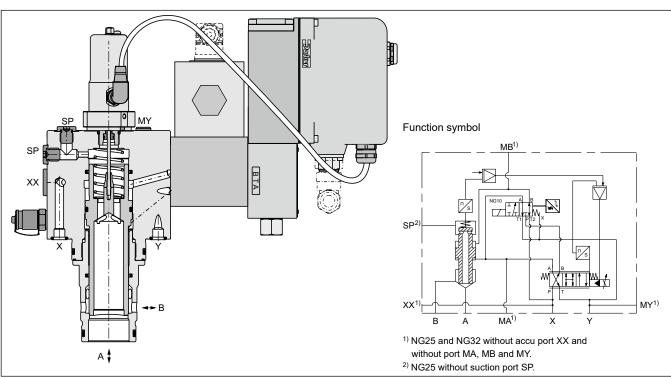

**TEP040** 

#### **Features**

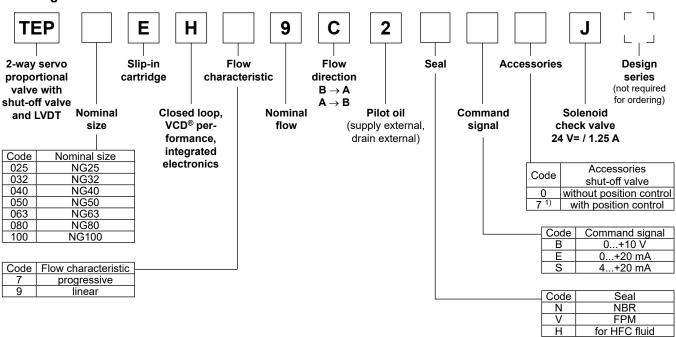

- Active pilot operated 2-way servo proportional valves with shut-off valve
- Flow directions A-B and B-A
- Cavity and mounting pattern according to ISO 7368
- · Fast step responses
- Completely mounted and adapted unit with integrated electronics
- In order to ensure the closed position pilot pressure is required
- 7 sizes, NG25 up to NG100
- Shut-off function

#### **TEP040**

#### **Ordering code**

The DFplus pilot valve is also available with EtherCAT interface, see chapter 3, D\*FP and D\*1FP with EtherCAT.

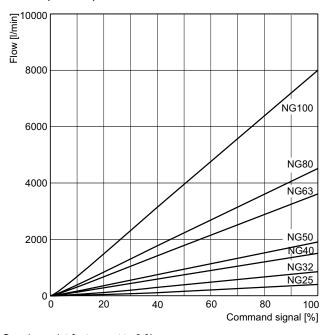

Please order connector separately.

Angle female connector must be used for NG25 to NG50.

# Characteristic flow/signal line

 $\Delta p = 5 \text{ bar}$ 

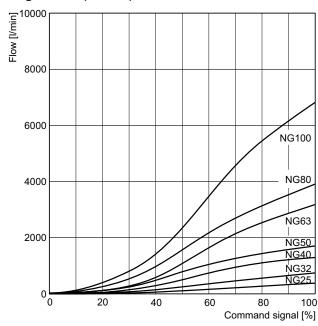

#### Linear (code 9)

Opening point factory set to 3 %

Characteristic curve measured with HLP46 at 50 °C.

#### Progressive (code 7)

Flow at different  $\Delta p$   $Q_{actual} = Q_{nominal} \cdot \sqrt{\Delta p_{actual} / \Delta p_{nominal}}$ 

TEP UK.indd 02.08.22

8-132

<sup>1)</sup> Please order female connector M12x1 separately (see accessories, directional control valves, female connector M12x1 (order no.: 5004109).

<sup>1)</sup> If valves with onboard electronics are used in safety-related parts of control systems, in case the safety function is requested, the valve electronics voltage supply is to be switched off by a suitable switching element with sufficient reliability.

## **Series TEP**

#### Installation recommendations

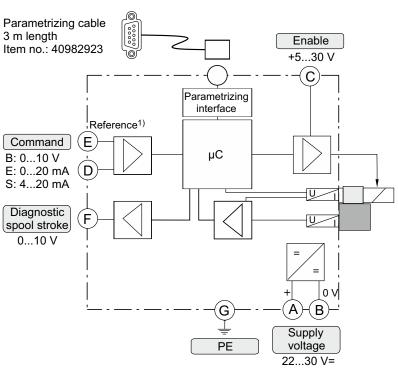

An insufficient pilot oil supply (e.g. due to long distances and/or small diameters) can negatively influence the dynamics of the TEP valve.

To avoid this, an accumulator can be connected to port XX at the valve body of the TEP. A short-term undersupply with pilot oil can be compensated via this accumulator.

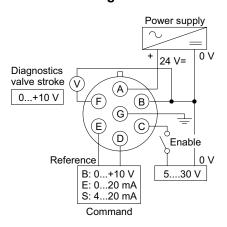

Sizing data: see operation manual.

Please also consider the Parker accumulator product range and the Parker Accumulator Sizing Software.
